

EMPIRICAL FORMULA WORKSHEET

Name _____ Date _____ Period _____

1. What is the empirical formula for a compound which contains 0.0134 g of iron, 0.00769 g of sulfur and 0.0115 g of oxygen?
2. Find the empirical formula for a compound which contains 32.8% chromium and 67.2% chlorine.
3. NAME the compound which contains 0.463 g Tl (#81), 0.0544 g of carbon, 0.00685 g of hydrogen and 0.0725 g oxygen by finding its empirical formula.
4. What is the empirical formula for a compound which contains 67.1% zinc and the rest is oxygen?
5. Barry Um has a sample of a compound which weighs 200 grams and contains only carbon, hydrogen, oxygen and nitrogen. By analysis, he finds that it contains 97.56 grams of carbon, 4.878 g of hydrogen, 52.03 g of oxygen and 45.53 g of nitrogen. Find its empirical formula.

Molecular Formula Worksheet

Molecular formula – a formula showing the types and numbers of atoms combined in a single molecule of a molecular compound. It is a whole number multiple of the empirical formula.

The relationship between a compound's empirical and molecular formula can be written as:

$$\begin{array}{c} x(\text{empirical formula}) = \text{molecular formula} \\ \text{also} \\ x(\text{empirical formula mass}) = \text{molecular formula mass} \end{array}$$

1. To determine the molecular formula of a compound, you must know the compound's formula mass.
2. Divide the molecular mass by the empirical formula mass to determine the whole number multiple (x). You may have to find the empirical formula in order to obtain the empirical formula mass.

Problems:

1. In a previous problem, the empirical formula of a compound of phosphorus and oxygen was found to be P_2O_5 . Experimentation shows that the molar mass of this compound is 283.89g. What is the compound's molecular formula.
2. Determine the molecular formula of the compound with an empirical formula of CH and a formula mass of 78.110amu.
3. A sample with a formula mass of 34.00 amu is found to consist of 0.44g H and 6.92g O. Find its molecular formula.
4. If 4.04g of N combine with 11.46g O to produce a compound with a formula mass of 108.0 amu, what is the molecular formula of this compound?
5. The empirical formula for trichloroisocyanuric acid, the active ingredient in many household bleaches, is OCNCl . The molar mass of this compound is 232.41g. What is the molecular formula of trichloroisocyanuric acid.
6. The molar mass of a compound is 92g. Analysis of a sample of the compound indicates that it contains 0.606g N and 1.390g O. Find its molecular formula.
7. Determine the molecular formula of a compound with an empirical formula of NH_2 and a formula mass of 32.06 amu.
